-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-10 are rejected under 35 U.S.C. 102(b) as being anticipated by Kano (US 2002/0172150).

1. Regarding claims 1, 3-4, 6 and 9-10, Kano discloses a method of establishing a path through a transportation network comprising network elements, wherein transmission signals are transported over physical connections and each transmission signal is divided into frames for a multiplex hierarchy (para. 33; note: SONET/SDH). The method comprises the steps of assigning a traffic stream a tag (fig. 1), providing forwarding information (item 11; fig. 2), and routing the data stream according to the label (fig. 3; para. 44; note: selected output ports). Further regarding claims 6 and 9, the method is performed by a network element or management facility (fig. 1) that comprises ports (para. 44), a low-level controller (item 10) and memory (item 11), a monitor (item 14), and a cross connect matrix (item 12).
2. Regarding claim 2, the method further comprises detecting a failure, and determining a new cross-connection based on the tag to restore the path (fig. 1; fig. 6; fig. 8, step S22; fig. 9).
3. Regarding claim 5, a new output label is given (fig. 2, note: Lout differs from Lin).
4. Regarding claims 7-8, the element comprises a high-level controller (item 13) for determining resources (paras. 35-36).
